EDUCATION

Virginia Tech

PhD, Computer Science & Applications (Aug 2025 – Present)

Relevant courses: Numerical Linear Algebra, Inverse Problems and Data Assimilation

George Mason University

BS, Computer Science, Minor, Statistics (Aug 2022 - May 2025)

Relevant courses: Data Mining, Computer Communications and Networking, Concurrent and Distributed Systems, Introduction to Artificial Intelligence, Applied Regression Analysis

TECHNICAL SKILLS

- Programming Languages: Python (NumPy, Pandas, PIL), Java, C, x86 assembly
- Technologies: Linux, Docker, FFmpeg, Git, Jenkins, MATLAB, HTML/CSS/JS, Oracle databases

EXPERIENCE

Virginia Tech [Fall 2025 – Present]

Graduate Teaching Assistant

- GTA for Virginia Tech's CS 5044 course (Object-Oriented Programming with Java) during Fall 2025 and for the CS 3114 course (Data Structures and Algorithms) during Spring 2026.

Old Dominion University Research Foundation (ODURF) [Summer 2025]

- Assisted with back-end web development involving Django for a project involving building an application to help victims of natural disasters. Responsibilities included working on the donor module, most notably helping design an inventory control system.

Mason Experimental Geometry Lab (MEGL) [Fall 2023 – Summer 2024]

Undergraduate Research Assistant

- Worked on a project on Universal Partial Tori, analyzing combinatorial objects such as universal cycles and de Bruijn tori, eventually presenting findings at a conference and in a paper submission to a journal.

Naval Research Enterprise Internship Program (NREIP) [Summer 2024]

Intern

- Competitive ten-week paid internship at Naval Surface Warfare Center Dahlgren Division, Dam Neck Activity, worked in a group using the Agile methodology to launch, deploy, and containerize a Java-based web application server and an Oracle 19c database server.

Naval Research Enterprise Internship Program (NREIP) [Summer 2023]

Intern

- Competitive ten-week paid internship at Naval Surface Warfare Center Dahlgren Division, Dam Neck Activity, created a Java application and set up a pipeline for it to automate various tasks in the deployment process.

PROJECTS

Rubik's Cube

- Used OpenGL to create a 3D Rubik's cube puzzle in an interactive pygame window. The window features buttons that can be used to rotate each face of the cube in each respective direction, just like a real Rubik's cube.

DNS Client

- Used Python's sockets library to send a DNS query to a server and receive and process a response.

Domain Coloring

- Used Python's PIL library to create a program that uses the principle of domain coloring to graph complex functions on a 2D plane. This program was then used to create a series of visually appealing, colorful graphs.

PUBLICATIONS

- W. Carey, M. Kearney, R. Kirsch, and S. Popescu, "Universal partial tori". *Designs, Codes, and Cryptography*, vol. 93, pp. 2803-2822, 2025. URL: <https://link.springer.com/article/10.1007/s10623-025-01609-9>.

ADDITIONAL INFORMATION

- Native speaker of English and Romanian, with limited proficiency in German.
